

## For Immediate Release

### **KineticSystems Announces New Family of Multi-function PXI Modules**

**Lockport (Illinois), USA (June 12, 2008)** – KineticSystems, an industry leader in high-performance data acquisition products and services, is pleased to announce its new family of Multi-function PXI Modules.

The P216/210/206/205 cards are simultaneous sampling multi-function PXI modules that provide 4 differential analog input channels, 14/16-bit A/D resolution, and up to 2 MS/s simultaneous sampling. They also provide 2 analog output channels with waveform generation capabilities to meet a wide range of application requirements.

Customers can rely on KineticSystems for virtually everything they need to create a customized data acquisition system for their specific application. Taking advantage of other KineticSystems innovations such as its recently announced SoftView™ Soft Front Panel Application, a simple yet powerful tool that integrates KineticSystems' entire line of PXI/CompactPCI instruments into a single software package, customers can quickly and easily construct fully integrated multi-instrument systems without any programming.

“We continue to grow our family of PXI/cPCI products to be able to provide our customers with the highest quality and most extensive list of functionalities of data acquisition products available on the market today,” said Patrick Cassady, Executive Vice President of DynamicSignals. “Our customers come to us looking for a complete end-to-end solution to meet their data acquisition needs,” Cassady added. “No single piece of hardware can solve their requirements. It takes a combination of different functionalities, hardware and software, all skillfully integrated together. KineticSystems has the products and experience that customers are looking for.”

KineticSystems PXI/CompactPCI product line of consists of simultaneous data acquisition boards, multi-function analog I/O boards, digital I/O modules, PXI/cPCI chassis, counters and pulse output modules, multiplexers, and high-speed digitizers.

The P216/210/206/205 cards are available to order immediately and pricing starts at \$1495.00 USD or less than \$375.00 USD per channel.

### **About KineticSystems**

KineticSystems ([www.kscorp.com](http://www.kscorp.com)) is a brand of DynamicSignals LLC ([DynamicSignals.com](http://DynamicSignals.com)). KineticSystems' high-performance data acquisition solutions are used in demanding applications worldwide including cutting-edge research in aviation and aerospace, design and test of radar and communications equipment, automotive testing, manufacturing test, and ATE systems.

As a DynamicSignals brand focused on the Test & Measurement industry, KineticSystems is able to provide solutions for an even wider range of applications across the main platforms of CompactPCI, PXI, VXI, PCI, and CAMAC.

Other DynamicSignals brands include GaGe, Preston Scientific and Cyber Systems. GaGe provides cutting-edge signal capture instruments and solutions based on the PCI and CompactPCI/PXI platforms. The Preston Scientific product line offers a wide range of proprietary analog input channel amplifiers, filters, multiplexers, digital I/O interfaces and complete analog-to-digital conversion systems. Cyber Systems' product line offers the FM7000 Load Control System for structural testing, DM7000 Data Acquisition System and the PC-based Versaplex 2000NT Data Acquisition System, among other data acquisition products.
