

FOR IMMEDIATE RELEASE

Pickering Interfaces Introduces a New USB 2.0 Hub Module

Enabling the ability to attach USB test devices and USB test equipment directly to a PXIe chassis

August 10, 2018 – Clacton-on-Sea, UK – Pickering Interfaces, a leading provider of modular signal switching and simulation for electronic test and verification, announces the addition of a PXIe version of their USB 2.0 Hub module—offering the same capabilities as their popular PXI USB 2.0 Hub (model 40-738).

This [USB 2.0 Hub \(model 42-738\)](#) is a single-slot 3U PXIe module that combines an 8-port USB 2.0 hub and USB data/power switching to provide a controlled connection between the backplane and USB products. Each port can connect and disconnect the power and data paths separately, simulating various connection faults.

The module can be used to connect a USB device under test or USB test equipment to the test system without reliance on the controller's USB ports, eliminating the need for freestanding powered hubs in a test system. It also provides a simple way of expanding the range of test equipment supported by PXI-based test systems to include USB power meters, USB data acquisition systems and USB scopes.

Pickering Interfaces stands behind all of their manufactured products with a **standard three-year warranty and guaranteed long-term product support**. Pricing and availability information is supplied on their website at www.pickeringtest.com.

About Pickering Interfaces

Pickering Interfaces designs and manufactures modular signal switching and simulation for use in electronic test and verification. We offer the largest range of switching and simulation products in the industry for PXI, LXI, and PCI applications. To support these products, we also provide cable and connector solutions, diagnostic test tools, along with our application software and software drivers created by our in-house software team.

Pickering's products are specified in test systems installed throughout the world and have a reputation for providing excellent reliability and value. Pickering Interfaces operates globally with direct operations in the US, UK, Germany, Sweden, France, Czech Republic and China, together with additional representation in countries throughout the Americas, Europe and Asia. We currently serve all electronics industries including, automotive, aerospace & defense, energy, industrial, communications, medical and semiconductor. For more information on signal switching and simulation products or sales contacts please visit www.pickeringtest.com.
